Clearance API

e-Invoicing Sandbox Release (2.1.0) 1.0.0 OAS 3.0.1

ZATCA wants to provide Taxpayers and Developers of Taxpayer e-invoicing solutions and devices the opportunity to test the integration of the systems with a ZATCA Sandbox environment prior to the launch of the production system. The Integration Sandbox (ISB) should enable solution developers to simulate the integration calls/requests that will be required later as part of the registration process and the submission of e-invoices, credit and debit notes to the production system. The Sandbox backend will accordingly simulate the validations and responses as part of the Cryptographic Stamp Identifiers issuance, renewal and revocation as well as the Reporting and Clearance function.

Although the ISB will give ZATCA an indication of the adoption rate for e-invoicing solutions in the market, it will not be mandatory to complete Sandbox testing as a pre-requisite for Registration/Taxpayer onboarding or accessing the production system. Similar to the Compliance and Enablement Toolbox (CET), the ISB is also aimed at Developers to build/update their solutions which are in line with ZATCA specifications and standards and are able to integrate with a ZATCA backend. Accordingly access to the ISB test/mock APIs will not be limited to Taxpayers and any user can register for a Developer account to access the ISB test/mock APIs and associated documentation. This registration will enable ZATCA to monitor the solution providers who intent to develop/update their solutions to integrate with ZATCA.

It should be noted that although the ISB will simulate most of the core functionalities of the production system, any validations that require integrations/access with external systems and/or storage as well as scenarios involving any backend exceptional handling (for example overriding the clearance process) will not be part of the ISB and will be covered by the core solution. Accordingly the ISB should not be considered as representative of all integrations and/or APIs that will be part of the production system.

Kindly note that validations which can result in an UBL XSD error also apply to optional fields if the tag is present and data input is not compliant. This includes leaving such fields blank. However if the tag itself is absent than the validations will not be performed.

This swagger documents the set of apis for the Sandbox (ISB) solution.

Developers can also refer to section 2.3.10 of the Developer Portal User Manual for additional guidance and steps.

Clearance Model Endpoint(s)

POST /invoices/clearance/single clear a single invoice.

Clears a single Standard invoice credit note, or debit note. Specifically, it accepts standard invoice, credit note, or debit note encoded in base64 and validates it to ensure the below. On successful validation, the API then signs the invoice, applies a QR code and returns back.

Compliance to the UBL2 XSD.

* EN 16931 Rules set.

* KSA Specific Rules set.

KSA Rules set will override EN 16931 Rules set in case the same rule exists in both sets.

* QR Code validation (if any)

* Cryptographical Stamp validation (if any)

* Previous Invoice Hash Validation (PIH)

Parameters

Name	Description
Authorization `string` *(header)*	Username (Production Certificate) and Password (Secret) should be taken from the Productin certificate response and put in the Authorize popup : - Username: 'binarySecurityToken' which represnts the Production Certificate - Password: 'secret' Authorization
accept-language `string` *(header)*	Specifies the langauge in which the response will be returned. Currently supported languages are English (en) and Arabic (ar) and it defaults to English. **Examples:** en ar
